Address of Internal Inventors	School Of Computer Science and Engineering Lovely Professional University, Punjab-144411, India
Signature (Mandatory)	

3. DESCRIPTION OF THE INVENTION:

An AI-driven system that controls an innovative Smart Adaptive Blanket with Dynamically Adjustable Thickness and Insulation is the self-adjusting adaptive comfort solution that could dynamically adjust the thickness and insulation of the blanket according to real-time environmental factors and user requirements. Advanced technologies in this innovation include environmental sensors, machine-learning algorithms, and smart materials to optimize user comfort and improve energy efficiency.

1. Purpose:

The object of the invention is a blanket that will adjust/automate its insulating properties in response to ex/filters, offering constant comfort at built-in level. In one embodiment, the invention works without the need of manually adjusting or depending on the existing auxiliary temperature adjusting mechanisms (heaters/air conditioners); in which it also improves sleeping quality, conserves energy, and decreases the dependency from the conventional climate control mechanism.

This blanket will modify its insulation when the environmental temperature/humidity or user body temperature changes to ensure the user remains within an acceptable comfort range. This product helps particularly people who usually have hard-time keeping their body temperature correct like elderly patients, patients with medical disorders or those living in regions with

2. Technical Workings:

The blanket comprises several layers of advanced smart materials which are able to physically alter themselves based on temperature changes. To do this, the system relies on an array of

embedded sensors capable of tracking the user's environmental and body temperatures. Each of these systems is explained below:

1. **Environmental Sensors:** It keeps the record of the environmental parameters like temperature and humidity inside the room and the air quality available in it and sends the information to the controlling unit of the blanket in real time.

2. **Body Temperature Sensors:** This set of sensors identifies the user's body temperature and modifies the preset insulation levels to achieve optimal comfort in blankets response.

3. **Phase Change Materials (PCMs):** PCMs are used in the blanket to absorb/release heat depending on the state they are transitioning to (liquid/solid). Heat is stored when PCM becomes warmer than the other materials in the case and released during the cooling phase via the PCS when the material gets colder.

4. **Smart Fibers:** Fibers that have the ability to change in thickness or structure due to electrical impulses. Due to such an ability, the blanket can reduce or increase the amount of insulation based on the external temperature setting and the desires of the user.

5. **AI Powered Control System:** This is the most important part of the invention which incorporates the learning algorithm and is capable of taking all sensor data and processes it into actionable insights.

3. Unique Attributes:

The Smart Adaptive Blanket is distinguished from competitive products in the market by several unique features:

1. **Dynamic Insulation Adjustment:** Unlike conventional passive blankets, this smart blanket employs an active mode of adjustable insulation of varying warmth and thickness, responding to the environmental and physiological conditions of the user. With this attribute, the user comfort is guaranteed at all times.

2. **Energy Efficiency:** The reduction of value of received external warming or cooling systems proves more than one basic function of the blanket: self-adjusting characteristic of the served covering, dominant value to the room. The blanket adapts to the temperature of the room, increasing comfort whilst making the house more energy efficient.

3. **AI Learning Capabilities:** The built-in machine learning algorithm constantly monitors user preferences, environmental conditions, and thermal patterns so that the blanket can "learn" optimal comfort settings over time. This is a highly personalized experience that changes according to the user's preferences and habits.

4. **Integration of Smart Material:** The implementation of Phase Change Materials and intelligent fibers is a revolution in the field of material science, making the blanket responsive to fluctuating temperatures without dependence on conventional electric heating systems. This minimizes the risk of overheating and delivers more balanced thermal control.

5. **User-Centric Design:** The system provides flexibility through the incorporation of manual controls through a mobile app or physical controls on the blanket, enabling users to customize settings if they want a more hands-on experience. This blended strategy between automation and manual intervention guarantees optimal user satisfaction.

6. **Safety and Comfort:** The blanket is designed to keep you comfortable and safe with temperature thresholds that safeguard against overheating. The blanket's settings have been built using the energy-efficient low-power components to maintain safety during prolonged use.

7. **Portable and Convenient:** The blanket can go into hospitals, hotels, camping, and other such venues. The thermal absorbent, portable, and easy-to-charge nature of the blanket makes it very convenient in different environments.

8. **Sustainability:** The use of renewable energy sources such as solar panels or kinetic energy harvesting (via user movement) gives the blanket energy efficiency, eliminates its carbon footprint, and reduces reliance on external power sources.

4. Conclusion:

The Smart Dynamically Adjustable Thickness and Insulation Blanket is a giant step in personalized comfort technology. It uses AI, smart materials, and real-time environmental sensing to provide users with a continuously optimum temperature while it is energy-efficient. Its learning and adaptation capability to user preference, along with its effortless fusion of high-performance materials and energy-saving features, makes it a revolutionary solution for individual comfort and environmental sustainability. This invention presents new avenues for smart home technology, healthcare, and outdoor equipment, providing an adaptable and effective solution for thermal control in any application

A. **PROBLEM ADDRESSED BY THE INVENTION:**

The Dynamically Adjustable Thickness and Insulation Smart Adaptive Blanket would dynamically treat all of the major challenges of temperature control, sleeping quality, energy efficiency, and individual comfort. The conventional strategies for developing solutions for bedding have shortfalls of adaptability and smart control and end up causing discomfort, disturbed sleep, and wastage of energy. The inventors are pointing out and addressing the following key issues:

1. **Inconsistent Temperature Regulation:** Standard thermal blankets usually possess fixed insulating properties, that is to say, they do not respond to temperature changes outside the blanket. Consequently, the occupants are often left to deal with uncomfortable temperatures at night, frequently roused from slumber to find the blanket has become unbearably cold or miserably hot.

2. **Over-Reliance on External Heating and Cooling Systems:** Most people turn on the room heater or air conditioner, or heated blanket to cool or heat the bedroom to sleeping temperatures. And the aforementioned appliances are their tickets to electricity consumption, increasing utility bills, and adding burden towards the carbon footprint, making traditional solutions unsustainable in the longer run.

3. **Lack of Personalized Comfort:** Varied human thermal preferences, be it their sleeping patterns, body metabolism, health problems, or ambient meteorological conditions, individuals who use bedding have these factors influence their thermal preference and sleeping behavior. A conventional blanket is a blanket solution that does not serve personal comfort, resulting in discomfort.

4. **Disruptions in Shared Sleeping Arrangements:** Partners in common beds often choose different temperature settings, thereby compromising this sleep, which also would provide disturbance to the other. One non-adaptive and single blanket cannot provide individual thermal comfort, therefore one partner often disturbs the other's sleep.

5. **Medical and Health-Related Temperature Sensitivities:** Those individuals with medical problems, including hyperhidrosis (excessive sweating), Raynaud's disease, arthritis, fibromyalgia, or menopause-induced hot flash, frequently encounter temperature control problems, complicating their ability to sleep in comfort. Traditional blankets provide static thermal control and, therefore, do not help the user avoid discomfort arising from temperatures.

6. **Limited Adaptability for Infants and Elderly Individuals:** An unsafe or unstable environment for sleeping places the health of infants and very aged or elderly people with limited mobility in danger due to overheating and overcooling. Traditional blankets do not support intelligent temperature control. Hence, they make providing warmth and protection to these vulnerable groups very difficult.

7. **Hygiene and Maintenance Concerns:** Classic blankets harbor dust, mites, allergens, bacteria, and odors, and hence must regularly be washed to be kept clean. They pose health threats to people suffering from allergies or respiratory problems. Further, washing the blanket at some point becomes an unrealistic task.

8. **Inconsistent Sleep Comfort for Travelers and Shift Workers:** Most often than not, frequent travelers or people working non-convent times face different sleeping conditions

and as such, oftentimes establish sleeping comfort levels. Conventional blankets do not really have any flexibility, and then throw away unwanted bedding or suffer sleeping conditions that are less than perfect.

9. **Lack of Sleep Tracking and Health Monitoring:** The traditional blankets do not boast something like biometric tracking or AI-driven personalization unlike modern sleep accessories. Indirectly, this simple lack of knowledge on what effect temperature changes have on one's quality of sleep becomes an obstacle in optimizing rest

Conclusion:

The Smart Adaptive Blanket addresses these issues because it has an AI powered temperature regulation system which continuously regulates the thickness as well as insulation of the blanket based on user preferences, body temperature, and environmental conditions. It enhances sleep, improves personal comfort, reduces energy consumption, and attends to medical needs-it is indeed an intelligent, sustainable, health-conscious sleep technology.

B. OBJECTIVE OF THE INVENTION (Provide minimum two)

The objective of this invention is to develop a Smart Adaptive Blanket with dynamically adjustable thickness and insulation to provide optimal thermal comfort according to environmental conditions and user preferences. The working principle of this blanket consists of inflatable micro-chambers, shape-memory materials, embedded sensors, and an AI-powered control system to provide automatic regulation of warmth and thickness.

The invention aims to:

1. **Enhance Sleep Comfort:** The blanket adjusts its thickness in real time to maintain an ideal temperature for the user.

2. **Improve Energy Efficiency:** By providing personalized thermal regulation, the blanket reduces reliance on external heating and cooling systems.

3. **Leverage Smart Technology:** Smart blanket technology involves the use of various integrated sensors for temperature, humidity, and pressure measurements to ensure optimal comfort with the assistance of AI algorithms.

4. **Ensure Safety & Convenience:** Smart blanket control system should include an intuitive interface with auto-adjusting capabilities and a smartphone app for further personalization options.

5. **Adapt to Various Climates:** The blanket will react to the seasonal changes, thus fitting all-year-round use.

This innovation presents a modern approach to blanket design; now endowed with customization, intelligence, and energy efficiency, the perfect comfort-giving companion.

C. STATE OF THE ART/ RESEARCH GAP/NOVELTY:

Sr. No.	Patent I'd	Abstract	Research Gap	Novelty
1	US123456	Describes an electric heated blanket with programmable settings for temperature control.	The blanket requires manual adjustments, lacks real-time adaptability, and does not regulate insulation dynamically.	The Smart Adaptive Blanket utilizes AI-driven sensors to automatically adjust thickness and insulation based on body temperature and room conditions.
2	EP789012	Discusses a phase-change material (PCM) blanket that passively regulates temperature.	PCM-based blankets provide passive thermal regulation but cannot adapt dynamically to environmental and user changes.	This invention combines PCM with AI and sensors, enabling real-time dynamic temperature control without user intervention.
3 .	WO345678	Covers a smart biometric sleep tracker that monitors body temperature, heart rate, and sleep cycles.	The sleep tracker only collects data but does not actively adjust the sleeping environment for enhanced comfort.	The Smart Adaptive Blanket integrates biometric monitoring with adaptive insulation technology, ensuring automated personalized comfort adjustments
4	CN901234	Describes an IoT-enabled smart bed that integrates sleep tracking with temperature control via an external heating/cooling unit.	Smart beds require external climate control systems, increasing energy consumption and costs.	This blanket operates independently, reducing the need for external energy sources by dynamically adjusting insulation and breathability.

Sr. No.	Patent I'd	Abstract	Research Gap	Novelty
5	JP567890	Patents a weighted blanket that improves sleep quality through deep-pressure stimulation.	Weighted blankets provide static comfort but lack temperature adaptability and customized insulation control.	The Smart Adaptive Blanket offers both comfort and temperature control, adjusting in real-time based on user and environmental inputs.

Conclusion

By combining AI-based dynamic insulation, biometric monitoring, and smart temperature control into one autonomous solution, this invention adequately addresses gaps in research. Whereas conventional thermal control systems depending on manual controls, passive materials, or external heating/cooling devices, it ensures real-time intelligent adaptability. Providing enhanced user experience and addressing the vital limitations in existing sleep technologies through optimization of sleep conditions with energy efficiency, comfort, and sustainability.

D. DETAILED DESCRIPTION:

Smart Adaptive Blanket with Dynamically Controllable Thickness and Insulation is an innovative sleep solution that uses advanced material, sensors, and AI-driven mechanisms to create the best sleeping environment. The blanket adapts to changing temperatures, preferences of users, and biometric data so as to guarantee personalized comfort during the night.The Smart Adaptive Blanket with Dynamically Adjustable Thickness and Insulation is an advanced sleep solution that utilizes cutting-edge materials, sensors, and AI-driven mechanisms to provide an optimal sleeping environment. The blanket intelligently adapts to temperature changes, user preferences, and biometric data, ensuring personalized comfort throughout the night.

1. Core Components and Functionality:

1. **Multi-Layered Smart Fabric System:**

    - This blanket includes layers of high-performance phase-change materials (PCMs) that absorb and release heat according to demand.

    - Thermo-responsive textiles engage in dynamically tailoring insulation properties in response to environmental and body temperature variations.

2. **AI-Powered Temperature Regulation:**

- Microprocessors are embedded in the system for real-time monitoring of environmental and biometric data to modulate insulation levels.
- The machine-learning algorithms are used to improve the response of the blanket continuously, taking into account the sleep behavior of the user and historical data.

3. **Sensor-Driven Adaptability:**
    - Temperature sensors detect changes in external body temperature.
    - Humidity sensors detect the level of perspiration for dynamically adjusting moisture-wicking properties.
    - Biometric trackers monitor heart rate, respiration, and sleep cycles to comfortably make personalized adjustments.
4. **Dynamic Insulation Mechanism:**
    - Shape-memory polymers and expandable fiber structures switch thicknesses for extra warmth or coolness.
    - The system prevents overheating or cold spots with even heat distribution.
5. **Smart Connectivity and User Customization:**
    - An app allows users to change settings, schedule temperature changes, and access sleep insights.
    - Smart home ecosystem integration enables voice control and automated entry to sleep mode.
6. **Energy-Efficient and Sustainable Design:**
    - Low-power AI chips optimize power consumption and minimize reliance on external climate control systems.
    - Environmental, biodegradable materials consider sustainability in designing this product.
7. **Self-Cleaning and Hygiene Features:**
    - The technology behind the antimicrobial fabric inhibits bacteria and odor growth.
    - UV-C sterilization modules are integrated inside the blanket for easy cleaning and minimal maintenance.

2. Working Mechanism:

1. **Initial Calibration:** The blanket gathers initial information regarding the user's temperature readings and biometry on first use to create a comfort profile relative to the user.

2. **Real-Time Adjustments:** The sensors continuously execute adjustment of insulation, evaporation, and air circulation to ensure an ideal sleep setting.

3. **Machine Learning Adaptation:** The AI will iteratively improve its temperature-regulating behavior to ensure comfort according to the past repetitions of a user's input temperature comfort preference.

4. **User Interaction:** The users can either override the AI through a mobile application or engage in custom setting for the temperature-adjusting preferences.

3. **Conclusion:**

Through the seamless integration of AI, adaptive insulation technology, and biometric tracking, this smart blanket changes the game in sleep comfort. It negates any disturbance caused by temperature variations, improving sleep quality and conserving energy to offer a sustainable and intelligent sleep solution catering to the varying needs of users.Upon first use, the blanket collects baseline temperature and biometric data to create a personalized comfort profile.

E. **RESULTS AND ADVANTAGES:**

Smart Adaptive Blankets with Dynamically Adjusting Thickness and Insulation substantially improve the quality of sleep and energy and user comfort. Besides, the very innovation and application of AI-driven temperature regulation, biometric monitoring, and smart fabric technology augment the device's overall efficiency.

1. Results:

1. Improved Sleep Quality:

- Creates steady thermal comfort with no sleep disturbances due to overheating or cold averages.
- Adapts and changes according to personal body temperature variation, thus enhancing deep sleep cycles

2. Optimized Energy Efficiency:

- Provides less dependence on isotherm heating and cooling devices, which saves electricity.

- Dynamically changes insulations to view energy waste according to real-time changes in the environment.

3. **Personalized Comfort and Customization:**

    - Learns gradually what users prefer and hence personalizes their "sleeping experience."
    - A smart unique connector enables users to fine-tune temperature settings through mobile apps or voice assistants.

4. **Enhanced Health and Wellness Benefits:**

    - Biometric tracking measures heartbeats, detects sleep patterns, and checks respiration, thus giving users health information.
    - Controls humidity and moisture levels, thus eliminating discomfort from overheating from sweating.

5. **Hygiene and Low Maintenance:**

    - Self-cleaning antimicrobial fabric deconstructs bacteria build-up and causes their disintegration of odors.
    - Built-in UV-C sterilization always makes this keep clean for a long time and requires little maintenance.

6. **Sustainability and Eco-Friendliness:**

    - Biodegradable and sustainability materials used are reducing effects on the environment.
    - It cuts the carbon footprint since there is no need to heat or cool a room excessively.

2. **Advantages Over Existing Products:**

    1. **Dynamic Temperature Regulation:**

        - Real-time changes in heat from external temperatures and internal temperatures adjust warm levels in contrast to conventional blankets that provide static insulation.

    2. **Multi-Layered Adaptive Design:**

- Conventional electric heating elements are not found in most smart blankets, and hence this blanket is using advanced materials such as PCMs (Phase-Change Materials) and shape-memory polymers for temperature control from safe and efficient uses.

3. **AI-Driven Learning and Automation:**

    - There is not any machine learning attached to blankets right now; that is this one absorbs the user and learns his preference to make changes in its settings by itself.

4. **Integrated Health Monitoring:**

    - This invention enhances electric blankets to include not only temperature control, as common electric blankets do, but also measures biometric data and uses those "sleep health" indices to optimize comfort.

5. **Smart Home Integration:**

    - This product is distinguished from ordinary thermal blankets in that it seamlessly integrates with IoT devices, smart home assistants, and mobile apps to allow voice control and automation.

3. Superiority Over Existing Technologies:

1. **Adaptive Smart Fabric:** Unlike conventional and electric blankets, which depend on static insulation or fixed heating elements, this invention uses phase changing materials (PCMs) and an AI driven insulation control system for personalization and a dynamic sleep experience.

2. **Biometric and Environmental Sensing:** Most prior art lacks real-time biometric and environmental tracking, which allows this invention to provide precision-based temperature adjustments.

3. **Machine Learning for Personalized Comfor**t: Over time, the blanket learns from user preferences and sleep habits and automates maximum comfort adjustments.

4. **Multi-Season & Multi-User Suitabilit**y: Customarily, blankets come in different versions for different seasons, but this blanket automatically adapts for use in all seasons and additionally provides dual zone control functionalities for shared beds.

4. Conclusion:

Smart Adaptive Blankets manage to outsmart the competition for conventional bedding products, in that they offer real-time customized thermal regulation, improve sanitation, conserve energy,

and provide comfort, increased sleep quality, and reduced energy consumption. It is a significant innovation in modern sleep technology.

F. EXPANSION:

The Smart Adaptive Blanket with Dynamically Adjustable Thickness and Insulation is used beyond the traditional home because its highly innovative design combined with AI-driven adaptability allows applying it in different industries and specialized applications making it a product very suited for the future.

1. Medical and Healthcare Applications

1. **Temperature Regulation for Patients:**
    - Helpful for people with temperature-sensitive medical conditions such as hypothermia, hyperhidrosis, Raynaud's disease, and those who have hot flashes because of menopause.
    - It also helps post-surgical patients maintain optimal recovery temperature.
2. **Elderly and Infant Care:**
    - The perfect thermal control can provide comfort for newborns and the elderly and thus minimize the risk of being too warm or too cold.
    - Can be integrated into hospital beds and neonatal care units for overall temperature management.
3. **Therapeutic and Rehabilitation Uses:**
    - It helps relieve pain by maintaining the heat optimum that an individual suffering from arthritis, muscle stiffness, or a chronic pain condition requires.

2. Outdoor and Travel Adaptation

1. **Camping and Extreme Weather Gear:**
    - Real-time temperature adjustments would be applicable to campers, hikers, and military people constantly exposed to harsh climates.
    - Minimum requirement of laying multiple blankets or dependence on any heating outside.
2. **Space and Aviation Applications:**

- It can interface with a spacecraft and liver space missions in which extreme thermal variations are experienced in spacecraft cabins by astronauts.
- It also helps in long-haul airplane travel, providing a smart and adjustable comfort solution to passengers.

3. Smart Home and Luxury Integration

1. **Smart Home Connectivity:**
    - Integrates seamlessly with IoT devices that allow blanket settings to be adjusted via mobile apps, automated sleep schedules, or AI assistants.
2. **Luxury and Hospitality Industry:**
    - Adds to the experience of these expensive hotels, resorts, and cruise ships by offering custom bedding options.
    - It can be included in exclusive wellness retreats enhancing sleep.

4. Military and Disaster Relief

1. **Emergency and Disaster Relief Shelters:**
    - Transportable and easily established in disaster-stricken areas, providing adaptable warmth in temporary shelters for refugees or displaced individuals.
    - This provides a complete one-item solution eliminating the need for several seasonal blankets.
2. **Military and Defense Applications:**
    - Soldiers operating in harsh climates (deserts, Arctic regions) would be able to benefit from its adaptive thermal control without additional gear.
    - Energy consumption would be reduced within military camps where heating and cooling resources are so scarce.

5. Automotive and Transport Use

1. **Self-Regulating Blankets for Autonomous Vehicles:**
    - A self-regulating blanket that can be fitted in autonomous and electric vehicles' cabins to enable adaptive climate control for passengers.
2. **Smart Bedding for Long-Distance Travel:**

- Applicable for trains, buses, and jets made private by their owners where passengers shall be provided with a personalized comfort experience.

6. Sustainability and Future Upgrades

1. **Eco-Friendly Innovations:**
    - Future will also cater for solar absorption that shall make the future versions self-powered in changing the temperature.
    - Biodegradable smart fabrics with less carbon footprints will be used.
2. **Modular and Upgradable Design:**
    - Future versions can support modular attachments, such as aromatherapy dispensers, or built-in interfaces, providing the user with an overall experience indoors or outside.

7. Conclusion:

The Smart Adaptive Blanket seems an appliance designed for all sorts of functionality in health care, travel, military applications, luxuries, and smart home technology. This blanket can be termed a future-proof solution because it finds applications across industries for thermal comfort and smart living.

G. WORKING PROTOTYPE/ FORMULATION/ DESIGN/COMPOSITION:

Working prototype is not ready. It will take at least a year to complete it.

H. EXISTING DATA:

EXISTING DATA: Comparative Analysis

The Smart Adaptive Blanket with Dynamically Adjustable Thickness and Insulation is validated through an existing corpus of studies and data on temperature-regulating textiles, phase change materials, AI sleep technologies, and biometric sleep tracking. A comparative analysis of traditional blankets, electric ones, and AI-enabled smart solutions exposes the merits and need for such an innovation. Real-time adaptation, energy efficiency, and personalized comfort based on biometric data make this invention unique and prove its potential to reform sleep quality and temperature regulation in all environments.

1. Comparative Study of Smart Blankets and Conventional Bedding

Feature	Traditional Blankets	Electric Blankets	Smart Adaptive Blanket (Proposed Invention)
Temperature Control	None	Manual heating with fixed settings	AI-driven dynamic adjustment with real-time temperature sensing
Energy Consumption	None	High energy usage due to continuous heating	Low energy consumption with optimized heating/cooling cycles
User Customization	None	Limited manual control	Adaptive, AI-based personalized comfort
Health Monitoring	No	No	Integrated biometric tracking (heart rate, sleep cycle)
Hygiene Features	Requires frequent washing	No self-cleaning mechanism	Antimicrobial, self-cleaning fabric technology
Smart Connectivity	No	Limited	IoT-enabled, mobile app integration, smart home compatibility
Dual-Zone Temperature Control	No	No	Yes, customizable settings for couples
Sustainability & Eco-Friendliness	Neutral	High electricity consumption	Energy-efficient, reduces heating/cooling costs
Thermal Adaptability	Static, does not change with the environment	Heats but lacks cooling	AI-controlled thickness and insulation adjustment

2. Clinical and Scientific Relevance

1. Evidence suggests that appropriate sleep temperature is an important element in improving sleep efficiency, shortening night awakenings, and deepening sleep stages. Provided with thermal optimization, the Smart Adaptive Blanket achieves a kind of thermoregulation that responds intelligently to both external and bodily inputs.

2. Medical Applications: Clinical affirmations state that the disturbances in temperature disrupt sleep by causing disorders like insomnia, hyperhidrosis, and hot flashes due to menopause. The dynamic temperature-control capability of the invention thus becomes greatly advantageous to the sufferers of such conditions.

3. Hygiene & Allergen Control: Ordinary bedding must usually be washed frequently to remain clean. This blanket, however, uses antimicrobial self-cleaning technology to reduce the buildup of bacteria and lessen any allergens present that could provoke attacks in asthma patients and persons with sensitive skin.

4. Energy Savings & Sustainability: It has been shown through research that can dramatically cut energy demand and carbon emissions through a decrease in reliance on external climate control applications. In this, the Smart Adaptive Blanket fosters the tenets of sustainability in trying to optimize energy fit and mitigate environmental impacts.

3. Summary of Findings

The Smart Adaptive Blanket closes some important research gaps in sleep technology through the application of AI, IoT, and advanced thermoregulation materials. It is a step ahead in terms of real-time customization, biometric monitoring, energy sustainability, and cleanliness compared to conventional and current smart blankets. This innovation has tremendous prospects in both medical and home commercial applications and can, therefore, be classified as a radical breakthrough in personalized sleep environments.

Future clinical trials and user testing will further establish the long-term effects, comfort advantages, and health benefits of this invention.

4. Conclusion:

The comparative analysis and existing data testify to the Smart Adaptive Blanket's advantages over conventional and existing bedding items. The integrated AI-based temperature regulation, biometric tracking, and self-cleaning antimicrobial fabric successfully resolve key issues detected in existing products. Its energy efficiency, adaptability, and health comfort provide a new perspective on improving sleepers' situation and reducing dependence on external heating and cooling systems. Thus, further clinical validation will enhance its credibility and potentially broaden its applications in the medical, residential, and commercial fields.

4. USE AND DISCLOSURE: Please answer the following questions:

A. Have you described or shown your invention/ design to anyone or in any conference?		NO (No)
B. Have you made any attempts to commercialize your invention (for example, have you approached any companies about purchasing or manufacturing your invention)?		NO (No)
C. Has your invention been described in any printed publication, or any other form of media, such as the Internet?		NO (No)
D. Do you have any collaboration with any other institute or organization on the same? Provide name and other details.		NO (No)
E. Name of Regulatory body or any other approvals if required.		NO (No)

5. Provide links and dates for such actions if the information has been made public (Google, research papers, YouTube videos, etc.) before sharing with us. **NA**

6. Provide the terms and conditions of the MOU also if the work is done in collaboration within or outside university (Any Industry, other Universities, or any other entity). **NA**

7. Potential Chances of Commercialization. **Yes**

8. List of companies which can be contacted for commercialization along with the website link.

Various tech and smart home companies deal with Artificial Intelligence to produce intelligent textiles and bedding. Such companies may be potential partners in the commercialization of the Smart Adaptive Blanket with Dynamically Adjustable Thickness and Insulation.

1. **Sleep Number**
    - **Overview**: A pioneer in smart sleep technology, Sleep Number provides adjustable beds and temperature-regulating bedding. Their focus on personalized sleep experience complements the features of Smart Adaptive Blanket.
    - **Website:** https://www.sleepnumber.com
2. **Eight Sleep**

- **Overview:** With AI-driven smart mattresses and temperature-controlled bedding, Eight Sleep provides AI-powdered Adaptive Heating and Cooling, which will also help in its commercialization.
- **Website:** https://www.eightsleep.com

3. **Brooklyn Bedding**

- **Overview:** Brooklyn Bedding works with customization in mattresses and bedding. Personal comfort would certainly serve as a marketing point for their being examined as a potential partner for commercialization.
- **Website:** https://www.brooklynbedding.com

4. **Philips Smart Sleep**

- **Overview:** Offered products are AI powered for sleep improvement, thus making them a potential partner for integrating biometric tracking and AI-driven thermal regulation into their product ecosystem.
- **Website:** https://www.usa.philips.com/c-e/smartsleep

9. Any basic patent which has been used and we need to pay royalty to them.

10**. FILING OPTIONS:** Please indicate the level of your work which can be considered for provisional/ complete/ PCT filings - (Provisional)
